

Insecticidal Coating

EFFECTIVE AND SAFER CONTROL OF DISEASE CARRYING INSECTS

Vectorcide Insecticidal Coating is a clear coating that can be applied to almost any hard surface. Once applied, it will remain active for over 12 months.

This coating uses a well-known active ingredient used for controlling insect populations in homes, commercial premises, and in crop spraying.

Food safe and non-harmful to humans and animal species, this coating is formulated to be deadly to insect species. It can be used safely on any hard surface such as walls, ceilings, fittings, bed frames, food cupboards, storage areas... in fact, anywhere!

PROVEN TO KILL ZIKA - MALARIA - AND DENGUE - CARRYING MOSQUITOES

IMPORTANT

Vectorcide Insecticidal Coating is a new technology that uses insecticides that are World Health Organisation Approved. It is designed to kill an insect without carcinogenic sprays and without causing damage to the environment.

This product does not immediately kill an insect and should not be confused with dangerous, toxic, and harmful insect sprays which endanger human and animal health and the environment. But once affected by Vectorcide Coating, it will die.

Vectorcide Insecticidal Coating will continue to protect you for OVER 12 MONTHS

Once in contact with Vectorcide Coating, the IP protected release mechanism of a WHO approved active held within the coating is released covering the cuticle of the mosquito.

The mosquito's central nervous and respiratory system is penetrated, immediately causing immense pain. The fatally injured insect will fly away to die before it is able to bite its prey, preventing the spread of disease.

A unique formulation in Vectorcide Coating and the release mechanism of the insecticide allows the use of low levels of active ingredients, and it is designed to give the coating its ultra-low toxicity signature.

BENEFITS

- **Vectorcide Insecticidal Coating is a clear, insecticidal, water-based coating which is applied to the inside of homes and workplaces.**
- **Kills all types of flying and crawling insects and is effective for over 15 months.**
- **Safe for humans and pets.**
- **Easy to apply by brush, roller or spray**
- **Vectorcide Insecticidal Coating can help to prevent the spread of diseases such as malaria, Zika virus, dengue fever, yellow fever and other insect-borne diseases**
- **Some targeted species are: Cockroaches, Ticks, Termites, Lice, Mosquitoes, Flies, Ants, Beetles, Weevils, Spiders, Vinchucas, Wasps, Silverfish & many more**
- **Proven and tested by the London School of Hygiene and Tropical Medicine**

- **The unique formulation uses micro and nano-encapsulation technology**
- **The coating formulation releases the insecticide only when insects break the capsules**
- **Tested by The London School of Hygiene and Tropical Medicine and in many 'in-the-field' trials in Africa**

Vectorcide products are being used in Africa with the aim of creating 'malaria-free' zones

Effective against all flying and crawling insects and does not affect our environment with toxic chemicals
